

Truckers Trident

The Original Angle Placement Tool

The Truckers Trident, designed and made by Tegral in Australia, is designed to allow drivers & loaders to place and retrieve Pallet Angles on the load from their position on the ground. This removes the risk of climbing on the deck. Its easy Twist'n'Lock Handle allows for simple extension & contraction to any length. Its multifunctional head allows it to be used on Tegral's range of Pallet Angles.

The top pair of wire prongs allows straps to be maneuvered into position with ease while keeping both feet on the ground. Built with the tough job in mind, a strong aluminum pole (25mm) and a strong spring-wire head which ensures it can easily place angles or straps. Approved and often required by large fleets as part of a 'boots on the ground' or 'no-touch tools' policy. Helps drivers adhere to safety protocols on-site by enabling them to secure loaded vehicles from ground level. TT0140 Extended Trident ideal for Loading Mez Decks.
