

HIGH TENSILE PIN MARKERS

Durable and reliable, these Pin Markers are designed for clear identification of underground utilities and for marking important drill pattern positions in the mining industry. Manufactured in Australia by Tegral, each marker features a tough polypropylene tag suitable for permanent marker writing, paired with a high-tensile 2.5mm wire for secure placement.

With a 500mm wire length and a 115mm x 35mm tag, the total length reaches 600mm, providing excellent visibility and ease of use in the field. UV-stabilised for outdoor durability, these markers are built to withstand harsh Australian conditions.

Available in 11 colours for easy categorisation, they are widely used across mining, construction, surveying, and civil industries. Supplied in boxes of 500.
