

A-FRAME SHORER

CODE:D0302

The A-Frame Shorer is designed to stabilise mixed pallet heights and prevent dangerous load shift when taller pallets are positioned beside shorter ones. It provides a reliable barrier that keeps uneven loads upright and secure throughout transit.

Simply load your pallets onto the A-Frame's feet and pair it with standard shoring bars to create a rigid restraint system that stops tall pallets from tipping or moving. It's especially valuable in trailers loaded in drop-order, where pallet heights can vary dramatically from front to back.

Product Specifications

Product Code	Weight	Width	Height	Foot Length	Foot Length (either side of upright)	Pole Thickness
D0302	15.5kg	800mm	1700mm	400mm	180mm	40mm

Material	Coating	Edges	Horizontal Bars	Maximum Rated Capacity
High Strength SHS Steel	Hot Dip Galvanised	Rounded	2	500kg/loaded pallet

Note: Use in conjunction with shoring bars at a minimum rated capacity of 400kg.
